Business Problem

A global retail company wants to **analyze customer purchasing behavior across different countries, genders, and product categories**.

The company wants to understand:

- Which **product categories generate the most revenue**
- Which **countries contribute the most sales**
- What **customer segments (age/gender)** spend the most
- How **sales trends change over time**

The goal is to **identify high-value customers, top-performing markets, and profitable product categories** to improve marketing strategy and revenue growth.

Key Performance Indicators (KPIs)

Revenue KPIs

1. **Total Revenue**
    - Sum of Purchase Amount
2. **Total Customers**
    - Count of unique Customer IDs
3. **Average Purchase Value**
    - Total Revenue / Total Customers
4. **Total Transactions**
    - Count of purchase records

Charts Required for Dashboard

Revenue by Product Category

Shows which category sells most.

Visualization: **Bar Chart**

Axis → Product Category
Values → Sum of Purchase Amount

Revenue by Country

Shows best performing markets.

Visualization: **Map / Filled Map**

Location → Country
Values → Sum of Purchase Amount

Gender Distribution

Understand customer segments.

Visualization: **Donut Chart**

Legend → Gender
Values → Count of Customers

Sales Trend Over Time

Track performance over time.

Visualization: **Line Chart**

Axis → Purchase Date
Values → Sum of Purchase Amount

Age vs Spending

Understand which age group spends more.

Visualization: **Scatter Chart**

X → Age
Y → Purchase Amount

Country vs Category Sales

Identify regional product preferences.

Visualization: **Stacked Bar Chart**

Axis → Country
Legend → Product Category
Values → Sum of Purchase Amount
